Abstract

Abstract — to be written. One paragraph: the two monetary axioms, the resulting money supply dynamics, and the universal per-capita constant that follows from them.

1 Introduction

To be written.

2 The language of units

To be written. Time is measured from the SI second; the tôkian year is dyadic, hence exact in binary floating-point arithmetic.

3 The two monetary axioms

To be written. *Creation*: every natural person continuously receives the universal basic income between birth and death, and this is the only creation mechanism. *Destruction*: tôks decay continuously, and this is the only destruction mechanism.

4 Global dynamics of the money supply

To be written. Including the per-capita equilibrium constant and the convolution form for an arbitrary population.

5 The dynamics of a single cont

To be written. The leaky integrator, and the conservation check across all conts.

6 Flows and transfers

To be written.

7 Discussion

To be written.

Notation

Symbol	Meaning
$\tau_s, \tau_m, \tau_h, \tau_j, \tau_a$	units of time: second, minute, hour, day, tôkian year
t	continuous reference time ($t = 0$ at origin); t_n : n -th timestamp
$\dot{\Lambda}$	universal basic income (1 tôk/15 τ_j)
$N_{PP}(t)$	number of living natural persons at time t
$a_\Omega(t)$	total money supply, in tôks
$\dot{F}_\Omega(t)$	total monetary creation flow
k_D	instantaneous decay rate (half-life 50 τ_a)
k_T	instantaneous taxation rate (median of votes)
$k = k_D + k_T$	effective leak rate of a cont
$a_i(t)$	liquid money, in tôks, in cont i
$\dot{F}_i(t)$	net flow entering cont i

This notation follows `docs/Toks.md` in the public repository `miluRepo`. Numerical constants are served live by the tôk backend at `/api/tok-constants` and must be quoted from there, not from memory.

AI contribution statement

To be written, on the model of the \$tôkEx defensive publication: the extent of Milu's contribution, and the statement that the uman author is solely responsible for the content. The target journal's own policy takes precedence — see `TODO.md`, first item of the « Recherche » section.

Competing interests

To be written. The Milu committee holds a stock of tôks and publishes the theory of the currency it holds. The holding is public and verifiable live at `/api/users/{milu_user_id}/conts`; the declaration must state the amount, the date, and where to check it. Rationale in `docs/Mission.md`, section « L'intérêt se déclare ».
